on behalf of the COMPASS Collaboration

International Workshop
The Structure of Nucleons and Nuclei
Como, Italy
June 10 - 14, 2013

Outline

- Introduction
- COMPASS experiment
- Measured asymmetries and theory expectations
 - Re-evaluation of $A_{LT}^{\cos\varphi_S}$ and $A_{LT}^{\cos(\varphi_h - \varphi_s)}$:
from the $l p$ to $\gamma * p$ cross-section
 - Theory expectations
- Summary

Outline

- **Introduction**
- COMPASS experiment
- Measured asymmetries and theory expectations
 - Re-evaluation of $A_{LT}^{\cos\phi_S}$ and $A_{LT}^{\cos(\phi_h - \phi_S)}$:
from the $l p$ to $\gamma * p$ cross-section
 - Theory expectations
- Summary

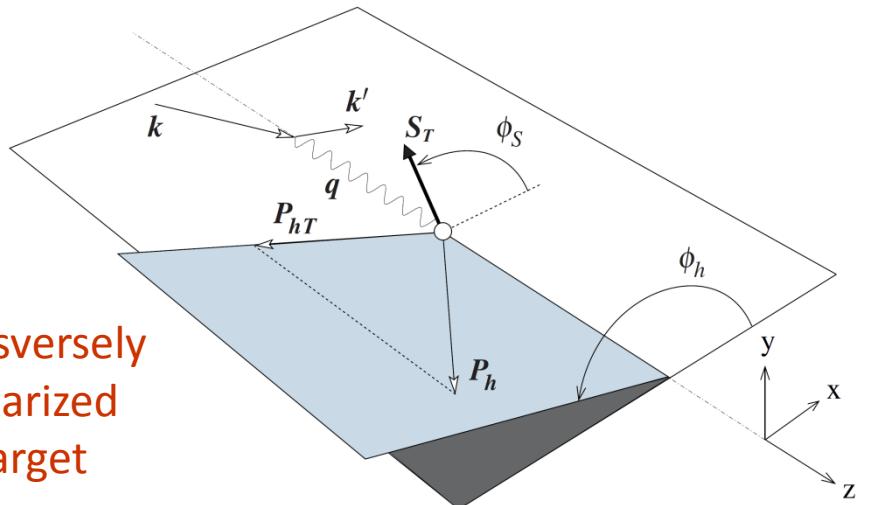

SIDIS x-section

A.Kotzinian, Nucl. Phys. B441, 234 (1995). Bacchetta, Diehl, Goeke, Metz, Mulders and Schlegel JHEP 0702:093 (2007).

$$\frac{d\sigma}{dxdydzdP_{hT}^2d\phi_h d\psi} = \left[\frac{\alpha}{xyQ^2} \frac{y^2}{2(1-\varepsilon)} \left(1 + \frac{\gamma^2}{2x} \right) \right] \times (F_{UU,T} + \varepsilon F_{UU,L}) \times \\ \left[1 + \cos \phi_h \times \sqrt{2\varepsilon(1+\varepsilon)} A_{UU}^{\cos \phi_h} + \cos(2\phi_h) \times \varepsilon A_{UU}^{\cos(2\phi_h)} + \lambda \sin \phi_h \times \sqrt{2\varepsilon(1-\varepsilon)} A_{LU}^{\sin \phi_h} + \right. \\ S_L \left[\sqrt{2\varepsilon(1+\varepsilon)} \sin \phi_h A_{UL}^{\sin \phi_h} + \varepsilon \sin(2\phi_h) A_{UL}^{\sin(2\phi_h)} \right] + \\ S_L \lambda \left[\sqrt{1-\varepsilon^2} A_{LL} + \sqrt{2\varepsilon(1-\varepsilon)} \cos \phi_h A_{LL}^{\cos \phi_h} \right] + \\ \left. COMPASS experimental setup

COmmon Muon Proton Apparatus for Structure and Spectroscopy

- High energy beam
- Large angular acceptance
- Broad kinematical range

Longitudinally polarized μ^+ beam (160 GeV/c).

Longitudinally or Transversely polarized ${}^6\text{LiD}$ or NH_3 target

Momentum, tracking and calorimetric measurements, PID

CERN SPS North Area.

Two stages spectrometer

- Large Angle Spectrometer (SM1)
- Small Angle Spectrometer (SM2)

Hadron & Muon high energy beams.

Beam rates: 10^8 muons/s, $5 \cdot 10^7$ hadrons/s.

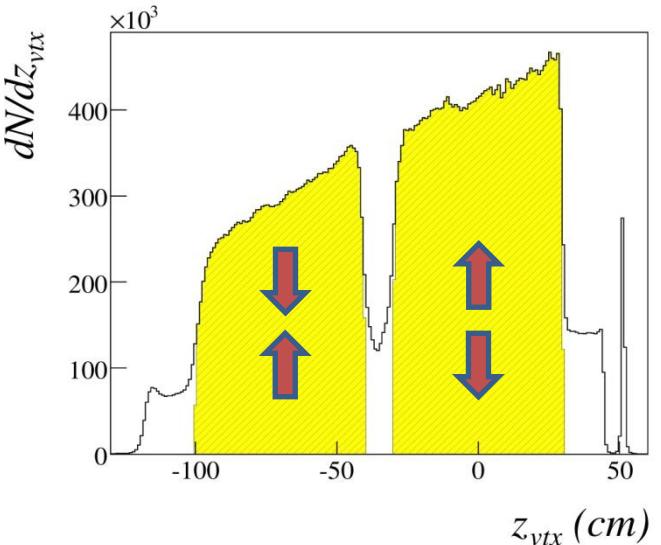

COMPASS Polarized target system

solid state target operated in frozen spin mode

Years 2002-2004

Deuteron - ${}^6\text{LiD}$:

- Two 60 cm long ${}^6\text{LiD}$ cells with opposite polarization
- Polar angle acceptance – 70 mrad
- Target Polarization $\pm 50\%$
- dilution factor $f = 0.38$

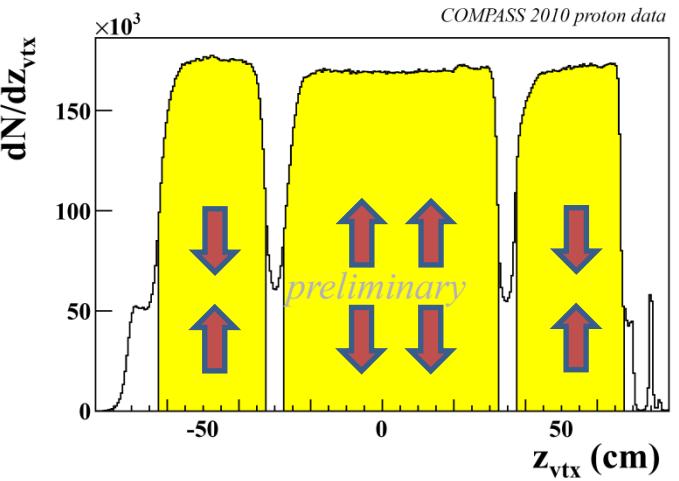

Data is collected simultaneously for the two target spin orientations
Polarization reversal after each ~4-5 days

Years 2007 and 2010

Proton - NH_3 :

- Three cells system (30 cm, 60cm, 30cm)
- Polar angle acceptance – 180 mrad (new magnet in 2006)
- Target Polarization $\pm 90\%$
- dilution factor $f = 0.14$

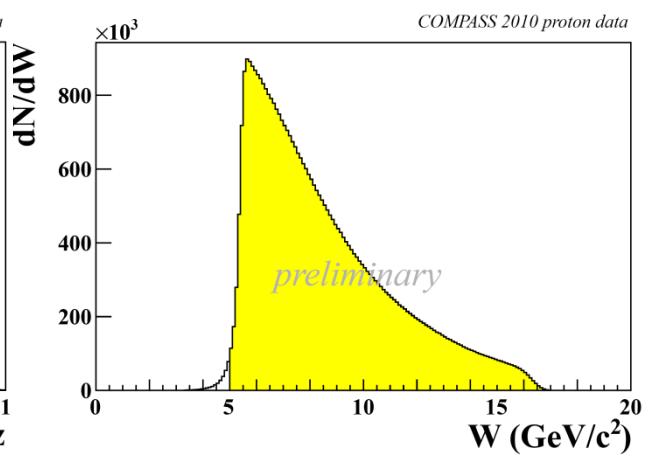

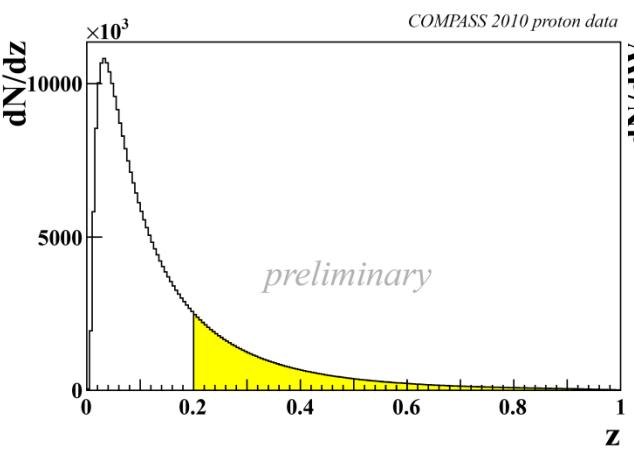

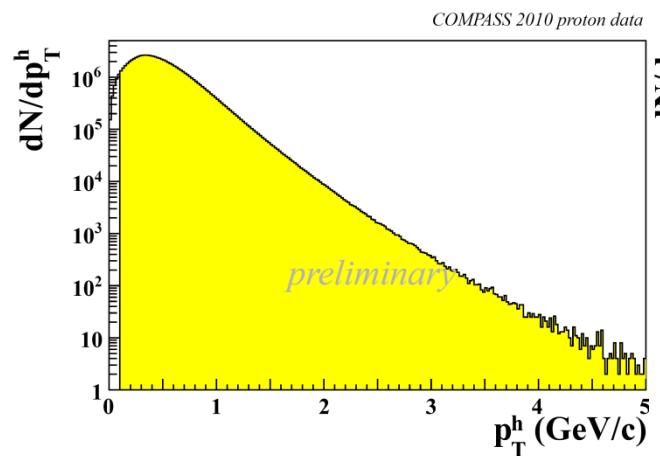

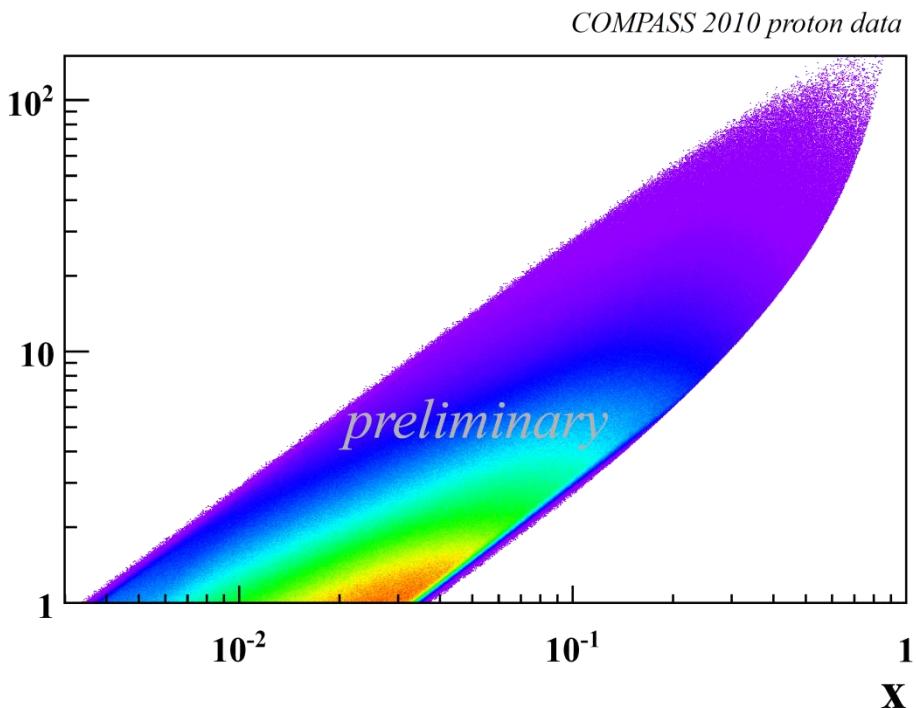

Data selection

DIS cuts :

- $Q^2 > 1 \text{ GeV}^2$
- $0.1 < y < 0.9$
- $W > 5 \text{ GeV}$

Hadron cuts :

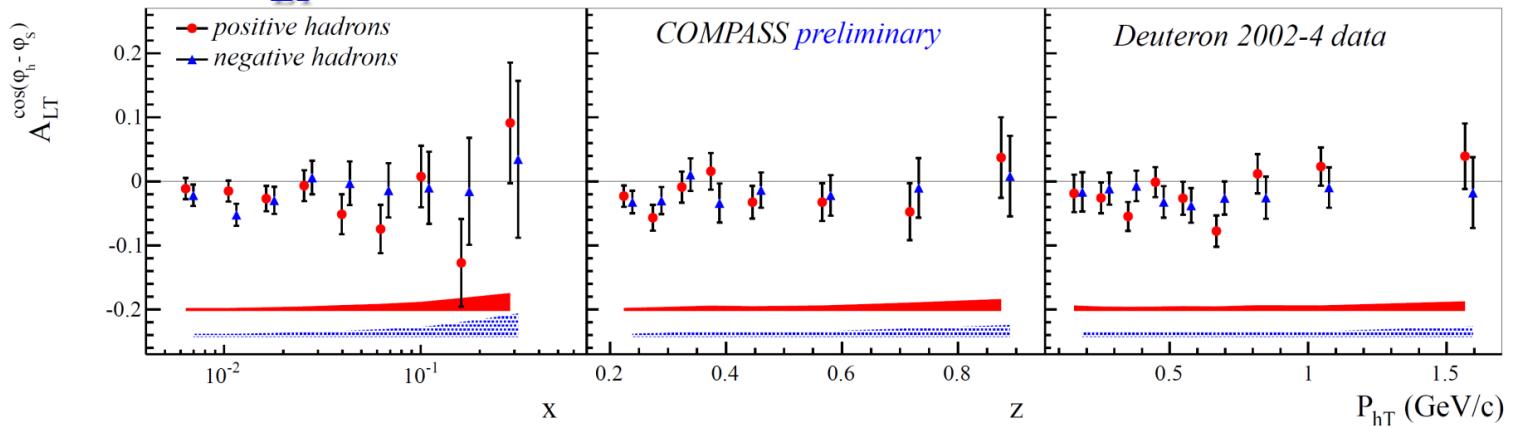

- $z > 0.2$
- $P_{hT} > 0.1 \text{ GeV}/c$

Similar trend for $A_{LT}^{\cos(\phi_h - \phi_s)}$
asymmetry is present in HERMES
preliminary results.

See next talk by L. Pappalardo

Results for $A_{LT}^{\cos(\phi_h - \phi_s)}$ COMPASS - JLab

${}^3\text{He}$ double-spin asymmetry A_{LT}

$$\propto \frac{g_{1T}^{\perp q}(x) \otimes D_{1q}^h(z)}{f_1^q(x) \otimes D_{1q}^h(z)}$$

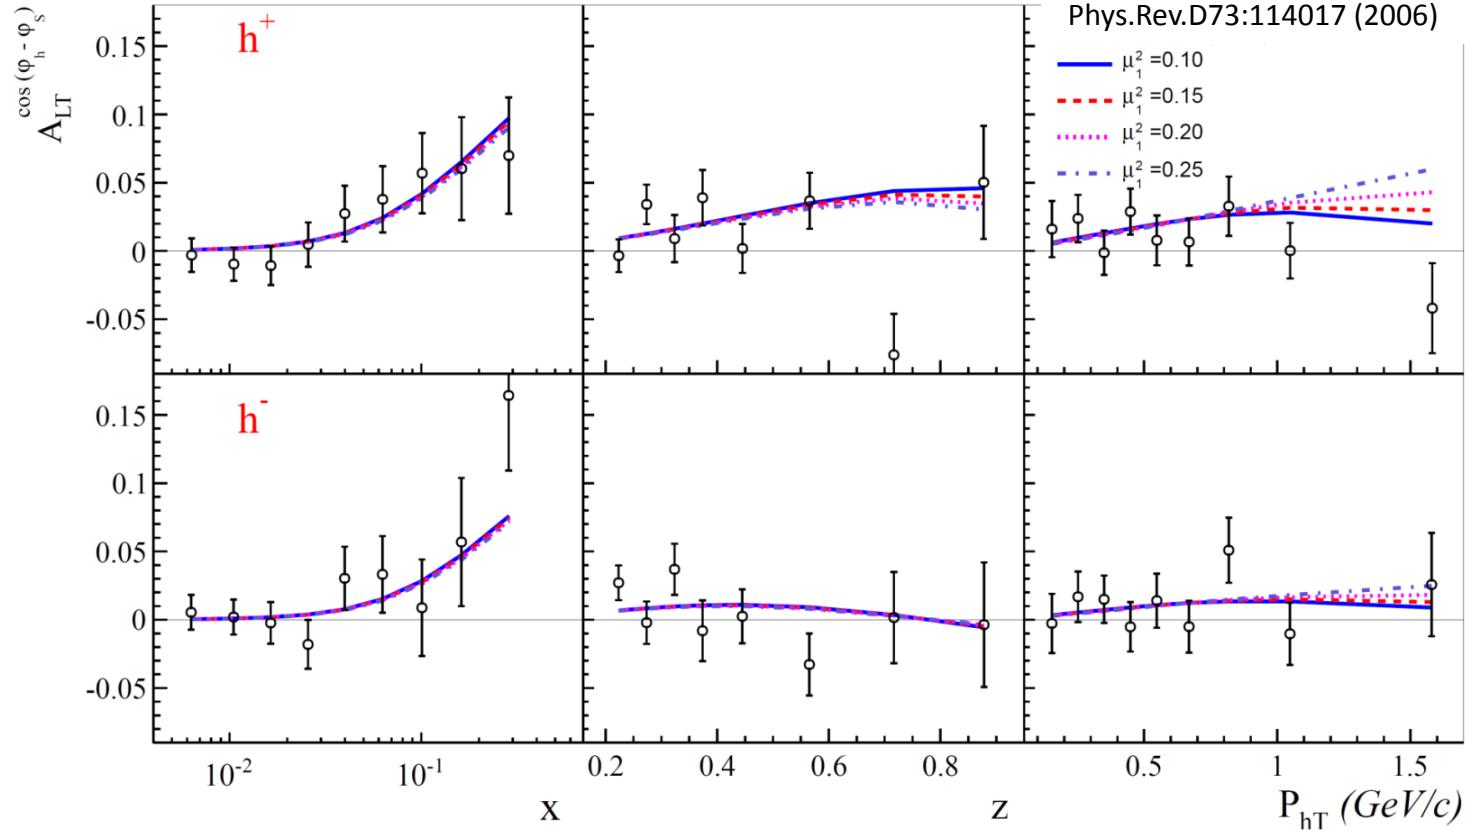

- First observation of a none-zero A_{LT} .
- First measurement on neutron(${}^3\text{He}$).
- Relate to quark TMD $g_{1T}(x, k_T)$.
- The real part of quark L=0 \otimes L=1 interference, "twin-brother" of Sivers.

Ph.D. thesis of J. Huang (MIT 2011).

$A_{LT}^{\cos(\phi_h - \phi_s)}$ and predictions from PRD 73, 114017(2006)

COMPASS *preliminary* Proton 2010

A. Kotzinian, B. Parsamyan, A. Prokudin
Phys.Rev.D73:114017 (2006)

Calculations are done using:
for g_{1T} the model:

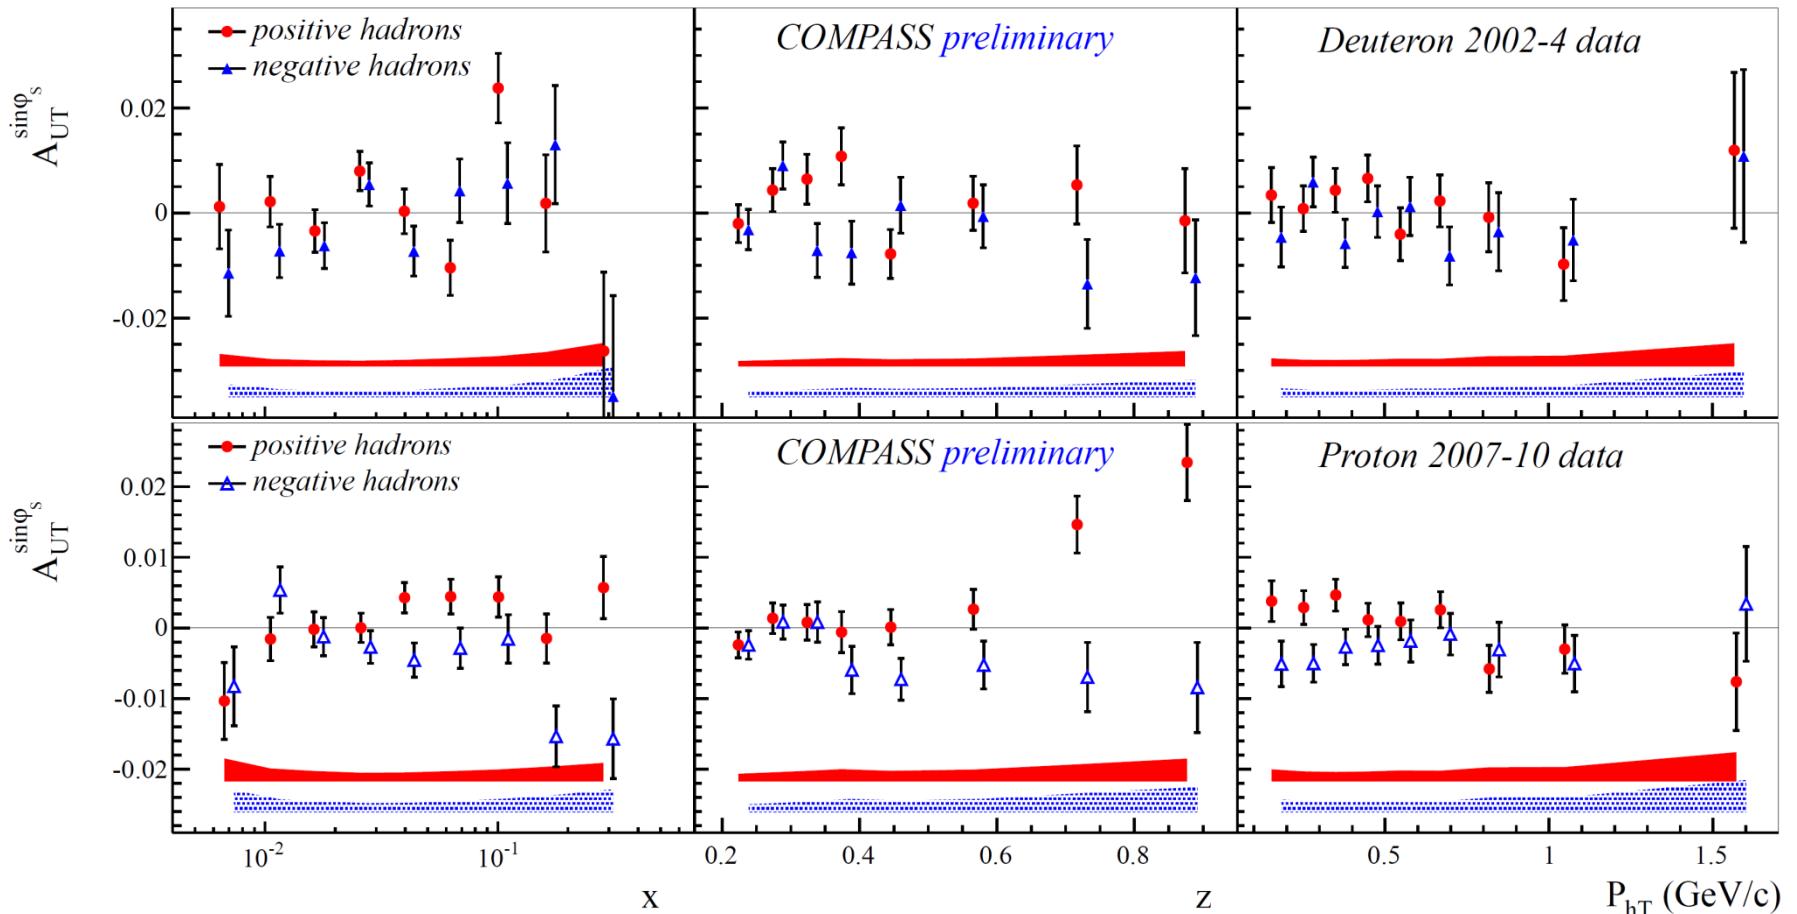

$$g_{1T}^{q(1)}(x, k_T^2) \approx x \int_x^1 dy \frac{g_1^q(y)}{y}$$

based on the Wandzura and Wilczek approximation;
Gaussian parameterization for k_T dependence;
LO GRV, GRSV2000 DFs
and Kretzer FFs

Asymmetry is evaluated in COMPASS specific mean kinematic points extracted from the data.
The predictions shows a good level of agreement with the experimentally extracted asymmetry

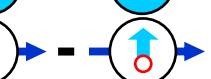

$$A_{LT}^{\cos(\phi_h - \phi_s)} \propto g_{1T}^q \otimes D_{1q}^h, \text{ "Worm Gear" PDF } g_{1T}^q : \text{---} \rightarrow \text{---} \leftarrow \text{---} \rightarrow$$

Results for $A_{UT}^{\sin\phi_s}$ on deuteron and proton

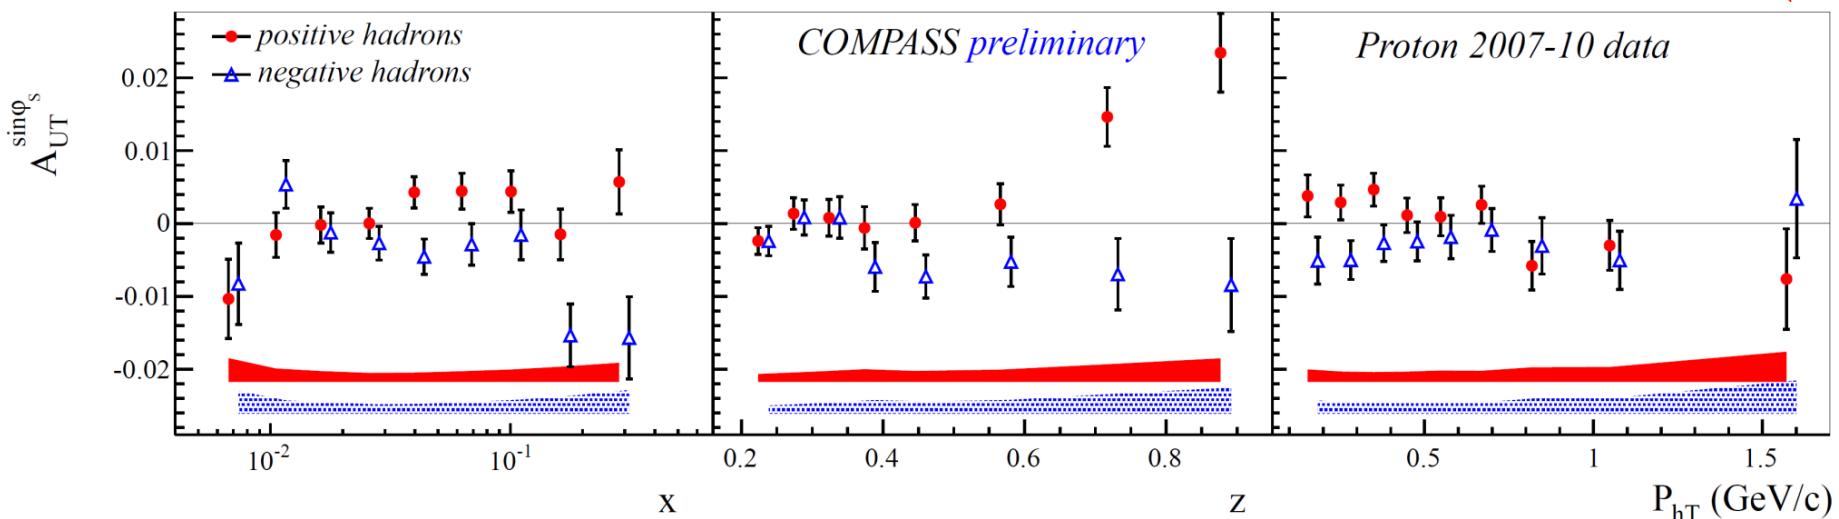

$$A_{UT}^{\sin\phi_s} \propto \frac{M}{Q} \left(h_1^q \otimes H_{1q}^{\perp h} + f_{1T}^{\perp q} \otimes D_{1q}^h + \dots \right),$$

$$\left. \begin{aligned} & \sin \varphi_s \times (\cos \theta \sqrt{2\varepsilon(1+\varepsilon)} A_{UT}^{\sin \varphi_s}) + \\ & \sin(\varphi_h - \varphi_s) \times \left(\cos \theta A_{UT}^{\sin(\varphi_h - \varphi_s)} + \frac{1}{2} \sin \theta \sqrt{2\varepsilon(1+\varepsilon)} A_{UL}^{\sin \varphi_h} \right) + \\ & \sin(\varphi_h + \varphi_s) \times \left(\cos \theta \varepsilon A_{UT}^{\sin(\varphi_h + \varphi_s)} + \frac{1}{2} \sin \theta \sqrt{2\varepsilon(1+\varepsilon)} A_{UL}^{\sin \varphi_h} \right) + \\ & \sin(2\varphi_h - \varphi_s) \times \left(\cos \theta \sqrt{2\varepsilon(1+\varepsilon)} A_{UT}^{\sin(2\varphi_h - \varphi_s)} + \frac{1}{2} \sin \theta \varepsilon A_{UL}^{\sin 2\varphi_h} \right) + \\ & \sin(3\varphi_h - \varphi_s) \times (\cos \theta \varepsilon A_{UT}^{\sin(3\varphi_h - \varphi_s)}) + \\ & \sin(2\varphi_h + \varphi_s) \times \left(\frac{1}{2} \sin \theta \varepsilon A_{UL}^{\sin 2\varphi_h} \right) \end{aligned} \right] +$$

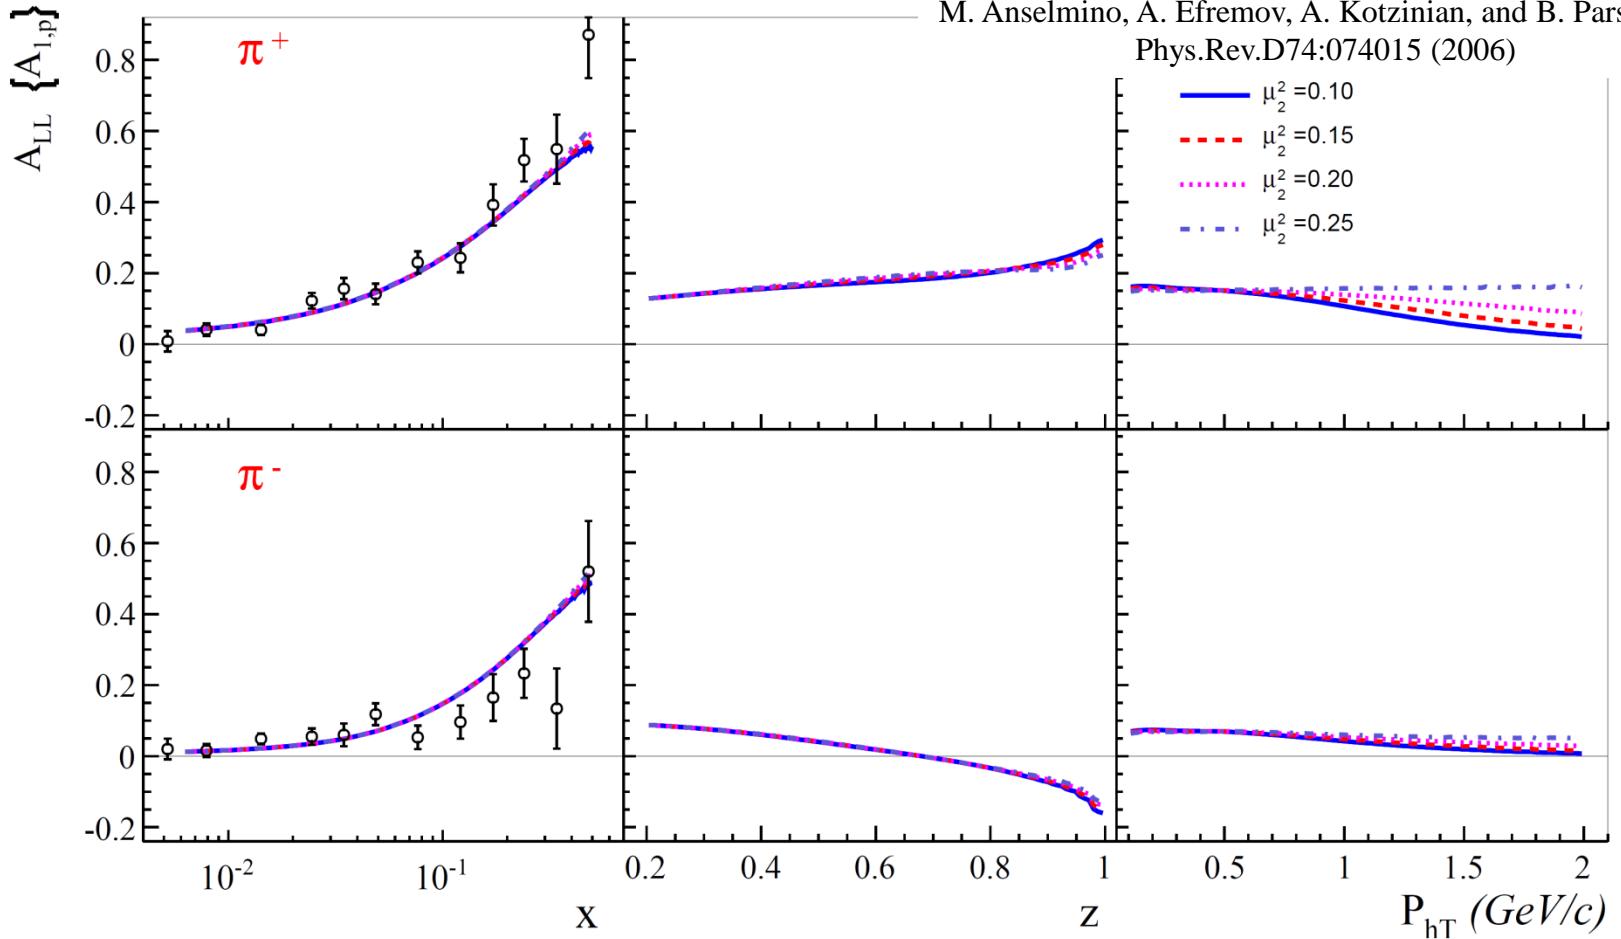

$$\frac{P_T}{\sqrt{1 - \sin^2 \theta \sin^2 \varphi_s}} \left[\begin{aligned} & \cos \varphi_s \times \left(\cos \theta \sqrt{2\varepsilon(1-\varepsilon)} A_{LT}^{\cos \varphi_s} + \sin \theta \sqrt{(1-\varepsilon^2)} A_{LL} \right) + \\ & \cos(\varphi_h - \varphi_s) \times \left(\cos \theta \sqrt{(1-\varepsilon^2)} A_{LT}^{\cos(\varphi_h - \varphi_s)} + \frac{1}{2} \sin \theta \sqrt{2\varepsilon(1-\varepsilon)} A_{LL}^{\cos \varphi_h} \right) + \\ & \cos(2\varphi_h - \varphi_s) \times \left(\cos \theta \sqrt{2\varepsilon(1-\varepsilon)} A_{LT}^{\cos(2\varphi_h - \varphi_s)} \right) + \\ & \cos(\varphi_h + \varphi_s) \times \left(\frac{1}{2} \sin \theta \sqrt{2\varepsilon(1-\varepsilon)} A_{LL}^{\cos \varphi_h} \right) \end{aligned} \right]$$

A_{LL} evaluated according to the PRD 74, 074015 (2006)

COMPASS Proton 2007 (PLB 693(2010))

M. Anselmino, A. Efremov, A. Kotzinian, and B. Parsamyan
Phys.Rev.D74:074015 (2006)

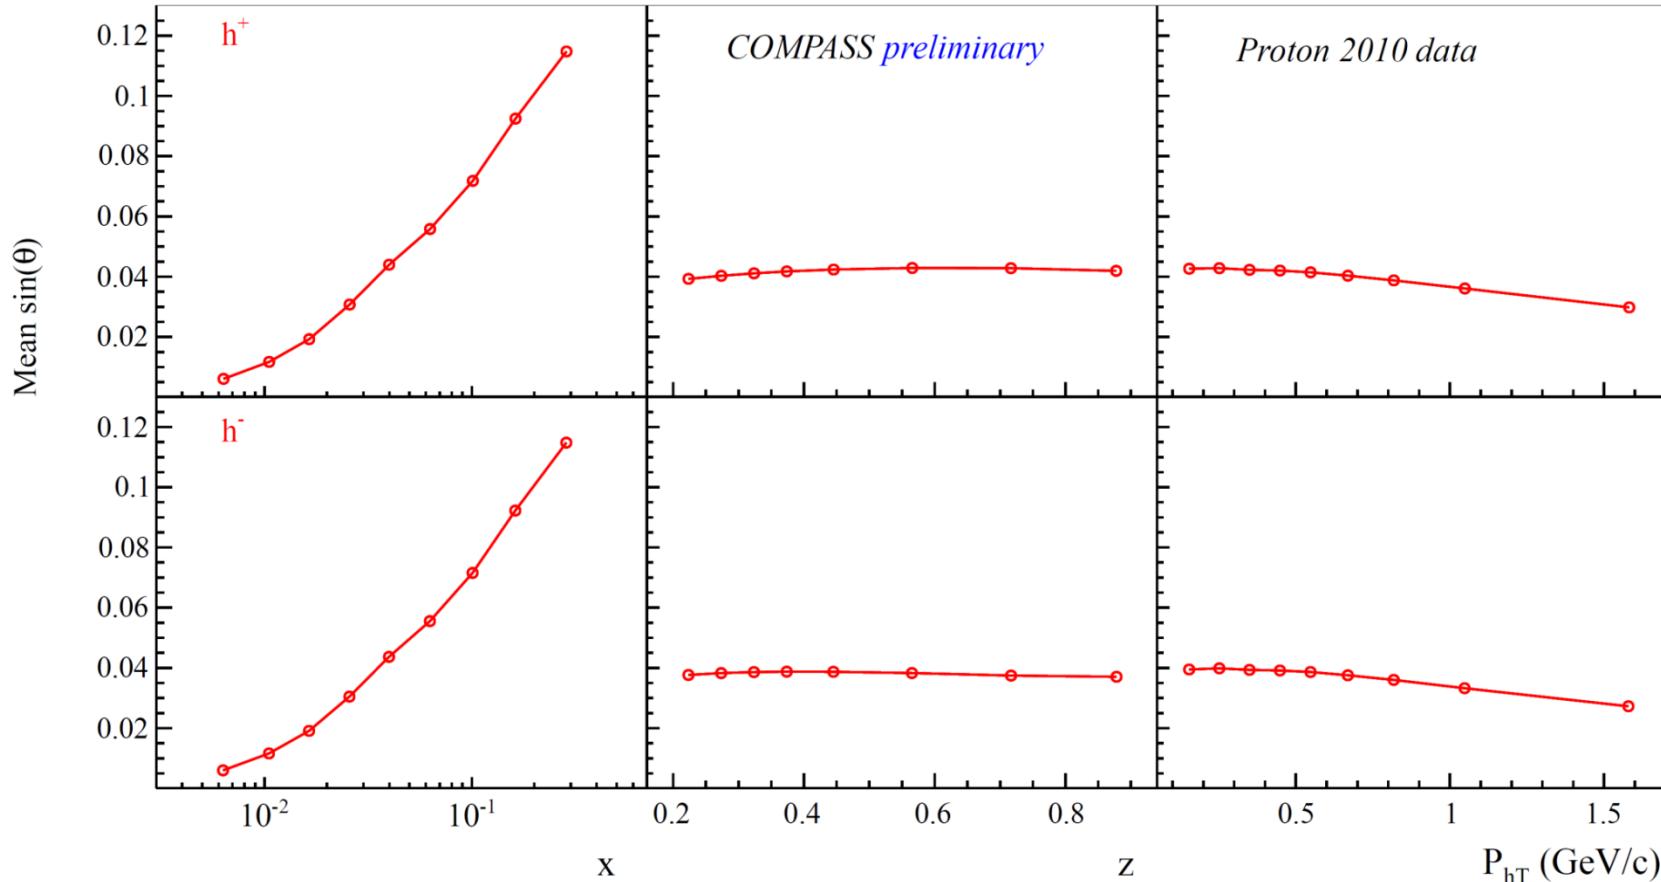

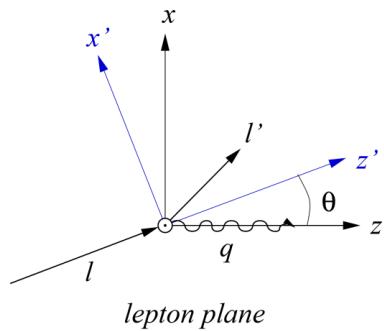

Asymmetry is evaluated in COMPASS specific mean kinematic points extracted from the data.
 Good level of agreement up to $x \approx 0.3$, which allows us to use the predicted z and P_{hT} – dependencies in $A_{LT}^{\cos(\varphi_S)}$ -correction.

Mean $\sin\theta$ -values

$$\sin\theta = \gamma \sqrt{1 - y - \frac{1}{4} \gamma^2 y^2}, \quad \gamma = \frac{2Mx}{Q};$$

$\theta \xrightarrow[\text{Bjorken limit}]{} 0 \Rightarrow S_T \simeq P_T, S_L \simeq P_L$

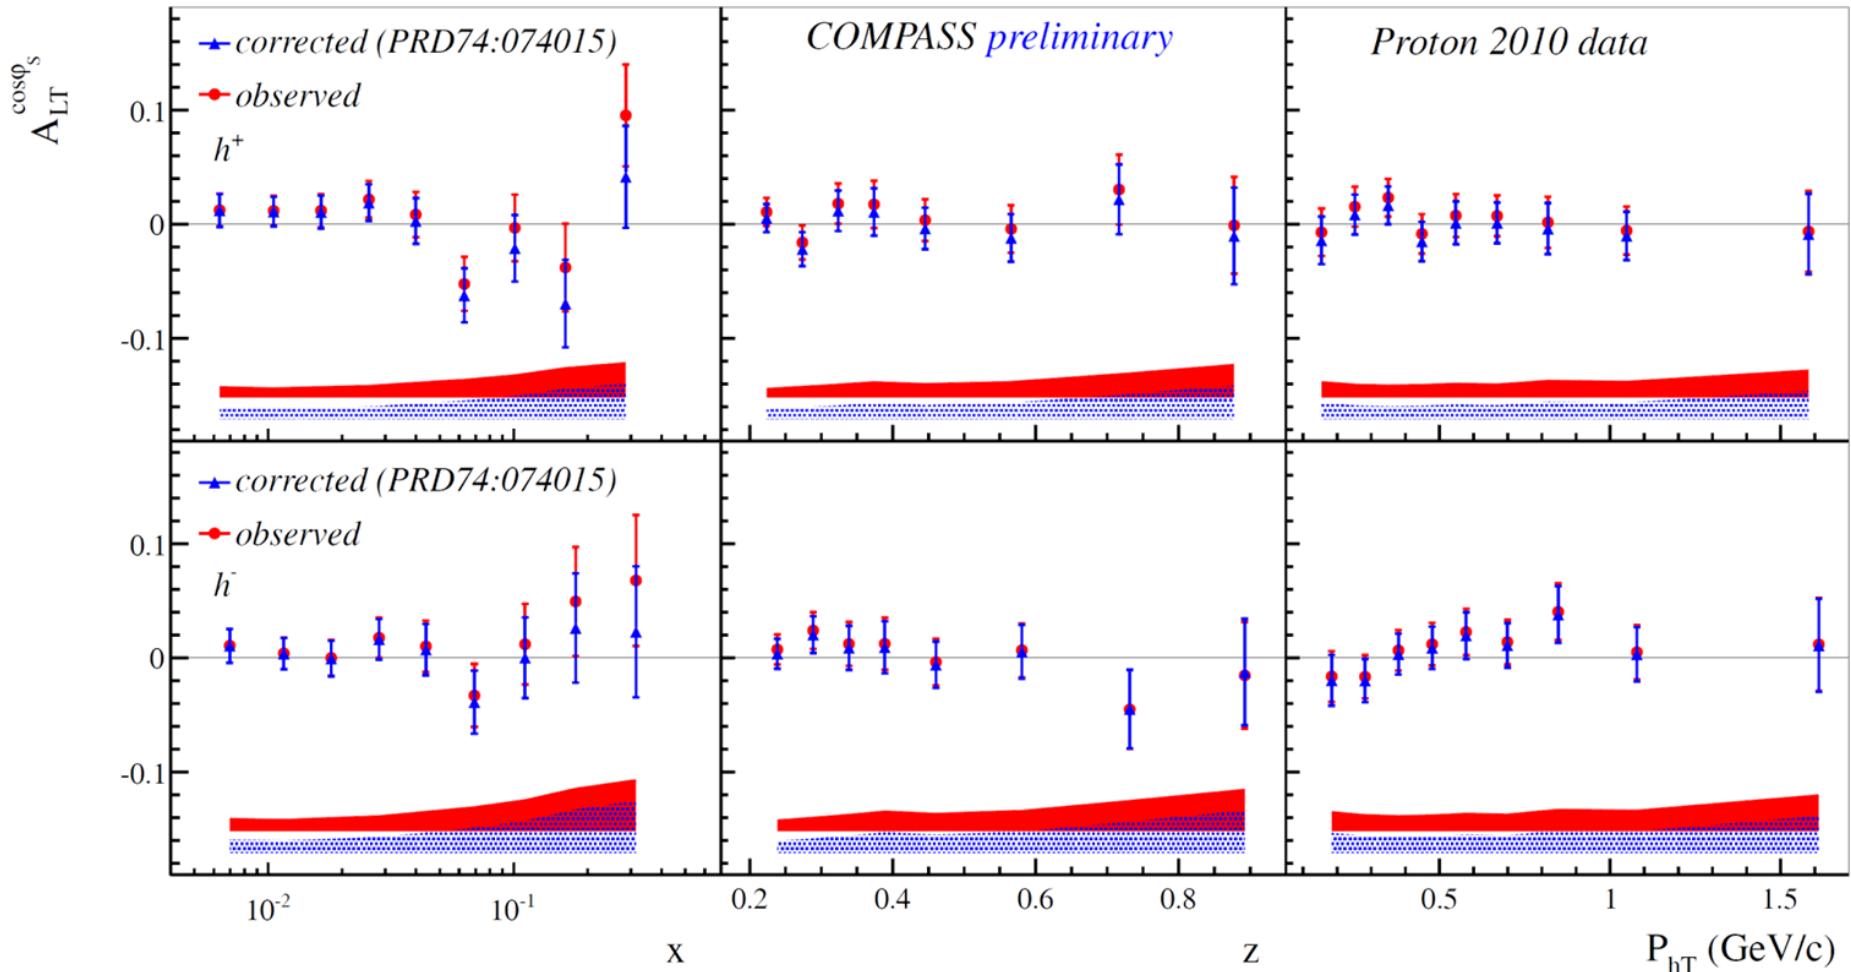

The $\sin\theta$ is small at COMPASS kinematics. The maximum reached value is ~ 0.12 and the mean is around 0.04 ($\cos\theta \approx 1$).

$A_{LT}^{\cos\varphi_s}$ corrected for A_{LL} -contribution

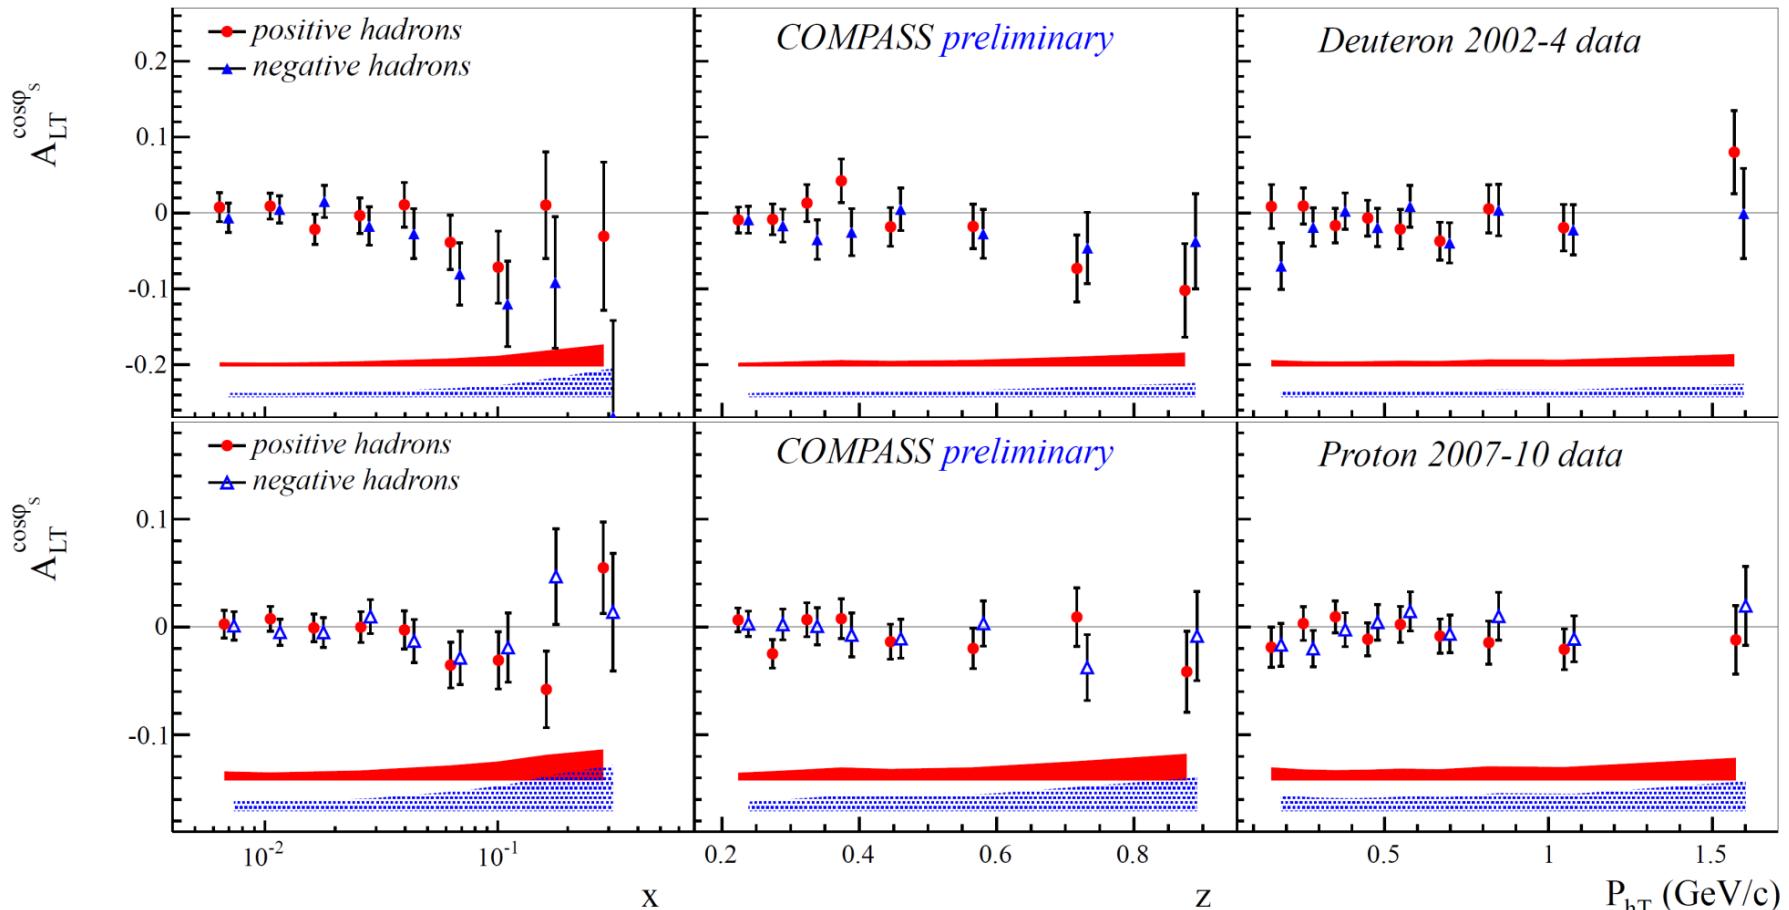

using A_{LL} from PRD 74, 074015(2006)

$$A_{LT}^{\cos\varphi_s'} \approx \left(\cos \theta A_{LT}^{\cos\varphi_s} - \sin \theta \frac{\sqrt{(1-\varepsilon^2)}}{\sqrt{2\varepsilon(1-\varepsilon)}} A_{LL} \right)$$

As expected, at large x the corrections become sizable.

Results for $A_{LT}^{\cos\phi_s}$ deuteron & proton

$$A_{LT}^{\cos\phi_s} \propto \frac{M}{Q} \left(g_{1T}^q \otimes D_{1q}^h + \dots \right), \quad \text{"Worm Gear" PDF } g_{1T}^q : \begin{array}{c} \text{---} \\ \text{---} \end{array} \rightarrow \circlearrowleft \quad \circlearrowright \rightarrow \circlearrowleft \quad \text{---} \quad \text{---}$$

Asymmetries for both proton and deuteron are compatible with zero within uncertainties

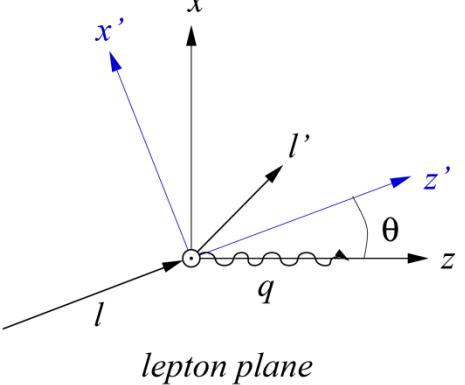

SIDIS x-section: from lp to $\gamma * p$ ($P_L=0$)

$$\frac{d\sigma}{dx dy dz dP_{ht}^2 d\varphi_h d\varphi_s} = \left[\frac{\cos \theta}{1 - \sin^2 \theta \sin^2 \varphi_s} \right] \times \left[\frac{\alpha}{xyQ^2} \frac{y^2}{2(1-\varepsilon)} \left(1 + \frac{\gamma^2}{2x} \right) \right] \times (F_{UU,T} + \varepsilon F_{UU,L}) \times$$

- Six “beyond Collins and Sivers” transverse spin asymmetries

$$A_{UT}^{\sin(3\phi_h - \phi_s)}, A_{UT}^{\sin\phi_s}, A_{UT}^{\sin(3\phi_h - \phi_s)}, A_{LT}^{\cos(\phi_h - \phi_s)}, A_{LT}^{\cos\phi_s} \& A_{LT}^{\cos(2\phi_h - \phi_s)}$$

have been extracted from COMPASS deuteron 2002-2004, proton 2007 and now also proton 2010 data.

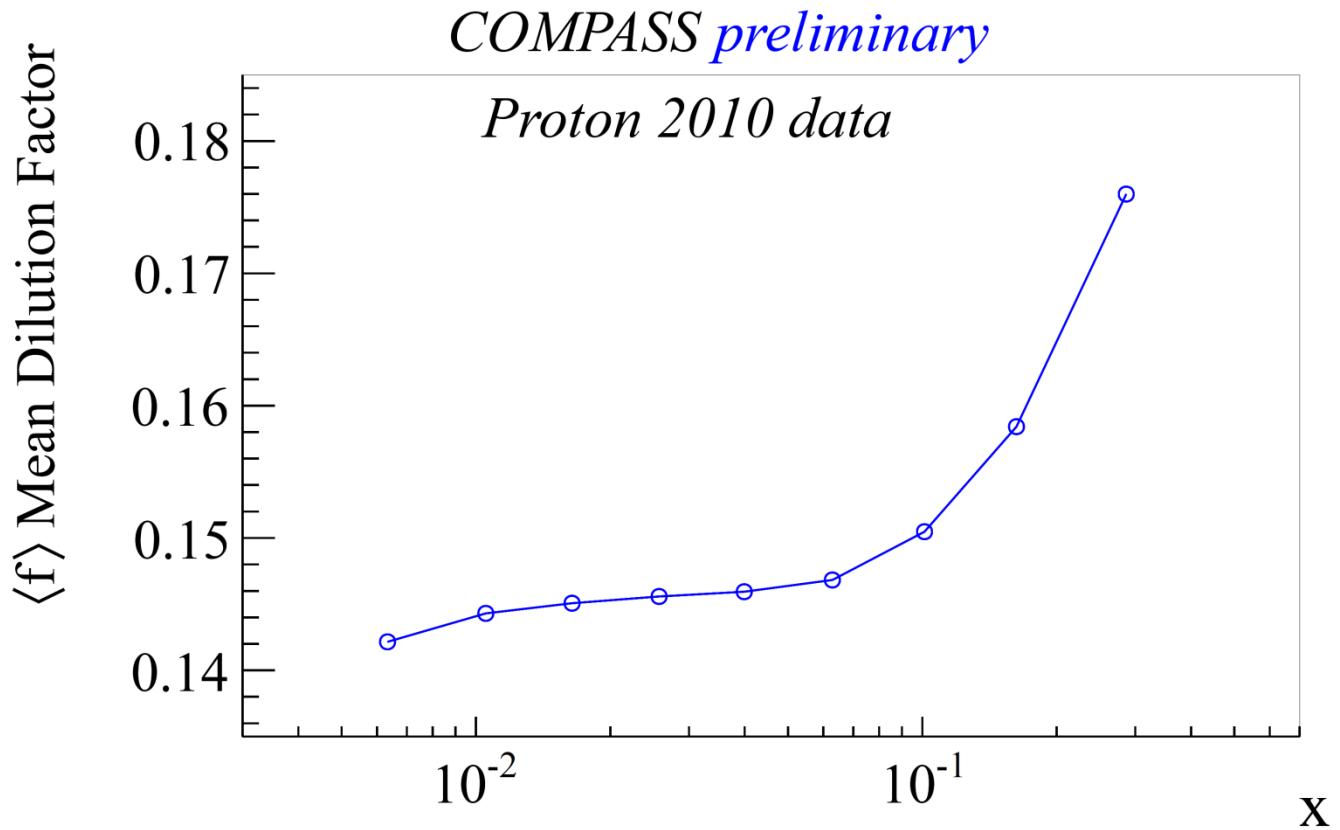

- “Deuteron” and “proton 2007” asymmetries found to be consistent with zero within the statistical accuracy of the measurement.
- Higher statistics and improved quality of the 2010 proton data allowed to reveal a non-zero trend for the $A_{LT}^{\cos(\phi_h - \phi_s)}$ and $A_{UT}^{\sin\phi_s}$ amplitudes.
- Observed effects confirm HERMES preliminary results.
- COMPASS results for the $A_{LT}^{\cos(\phi_h - \phi_s)}$ showed a good level of agreement with the theoretical predictions.
- Next → Six asymmetries for pions and kaons.

Thank you!

$A_{LT}^{\cos\varphi_s}$ corrected for A_{LL} contribution: using A_{LL} from PRD 74, 074015

$$A_{LT}^{\cos\varphi_s'} \approx \left(\cos \theta A_{LT}^{\cos\varphi_s} - \sin \theta \frac{\sqrt{(1-\varepsilon^2)}}{\sqrt{2\varepsilon(1-\varepsilon)}} A_{LL} \right)$$

$A_{LT}^{\cos(\phi_h - \phi_s)}$ asymmetry PRD73:114017,(2006)

There exists a relation between first momentum of g_{1T} and g_2 (follows from Lorentz invariance, Tangerman & Mulders) :

$$g_{1T}^{q(1)}(x) \equiv \int_0^x g_2^q(y) dy = - \int_x^1 g_2^q(y) dy = (WW - appr) = x \int_x^1 \frac{g_1^q(y)}{y} dy$$

$$f_1^q(x, k_T^2) = f_1^q(x) \frac{1}{\pi \mu_0^2} \exp\left(-\frac{k_T^2}{\mu_0^2}\right),$$

$$D_q^h(z, P_{hT}^2) = D_q^h(z) \frac{1}{\pi \mu_D^2} \exp\left(-\frac{P_{hT}^2}{\mu_D^2}\right),$$

$$g_{1T}^q(x, k_T^2) = g_{1T}^{q(1)}(x) N \exp\left(-\frac{k_T^2}{\mu_1^2}\right)$$

N is fixed by

$$g_{1T}^{q(1)}(x) = \int d^2 k_T \frac{k_T^2}{2M^2} g_{1T}^q(x, k_T^2)$$

$$g_{1T}^q(x, k_T^2) = g_{1T}^{q(1)}(x) \frac{2M^2}{\pi \mu_1^4} \exp\left(-\frac{k_T^2}{\mu_1^2}\right)$$

From analysis of unpolarized P_{hT} dependence and Cahn effect

$$\mu_0^2 = 0.25(GeV/c)^2, \quad \mu_D^2 = 0.2(GeV/c)^2$$

Naïve positivity constraint: $\frac{|k_T|}{M} |g_{1T}^q(x, k_T^2)| < f_1^q(x, k_T^2)$

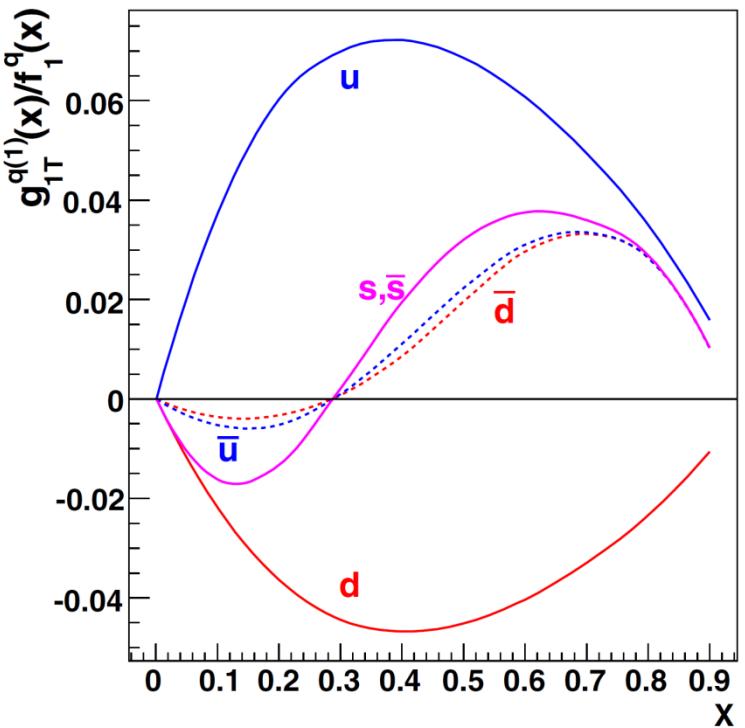

holds if $\mu_1^2 \leq 0.246 \text{ (GeV/c)}^2$

Predictions done for: $\mu_1^2 = 0.1, 0.15 \text{ and } 0.25(GeV/c)^2$

$$A_{LT}^{\cos \phi_h^S}(x, y, z, P_{hT}) = 2 \frac{\int_0^{2\pi} d\phi_h^S (d\sigma^{\rightarrow \uparrow} - d\sigma^{\rightarrow \downarrow}) \cos \phi_h^S}{\int_0^{2\pi} d\phi_h^S (d\sigma^{\rightarrow \uparrow} + d\sigma^{\rightarrow \downarrow})} = 2 \frac{\frac{2-y}{xy} \frac{Mz |P_{hT}|}{(\mu_D^2 + \mu_1^2 z^2)^2} \exp\left(-\frac{P_{hT}^2}{\mu_D^2 + \mu_1^2 z^2}\right) \sum_q e_q^2 g_{1T}^{q(1)}(x) D_q^h(z)}{\frac{1+(1-y)^2}{xy^2} \frac{1}{\mu_D^2 + \mu_0^2 z^2} \exp\left(-\frac{P_{hT}^2}{\mu_D^2 + \mu_0^2 z^2}\right) \sum_q e_q^2 f_1^q(x) D_q^h(z)}$$

$A_{LT} \cos(\varphi_h - \varphi_s)$ asymmetry *PRD73:114017,(2006)*

$$A_{TMD} = \frac{\text{Low } x, y, z \text{ & } p_T + \text{High } x, y, z \text{ & } p_T}{\text{Low } x, y, z \text{ & } p_T + \text{High } x, y, z \text{ & } p_T}$$
